*Response to Arguments*

*Priority*

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

*Claim Rejections - 35 USC § 112*

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 9-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 9 is indefinite because the scope of the term "immediate" is unknown.

The claims are indefinite because the process steps are not recited in a positive manner, e.g., --heating-- versus "heated."

Claim 10 is indefinite because it is unclear how it further defines claim 9. Specifically, it appears that the "PU" is inherently defined as that which is recited.

Claim 18 is indefinite because the scope of the phrase "partially takes place" is not known.

*Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1761

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over De Stoutz (U.S. Pat No. 3,394,042)(hereinafter Stoutz) in view of applicants' admissions.

Stoutz teaches the pasteurization of beverages, such as beer. Fig. 5 shows the time/temperature regime for the alcoholic beverage wine. From this figure it can be seen that the beverage is cooled immediately after it has reached its maximum temperature. Stoutz also teaches the use of recuperators and various heating phases. See Fig. 1.

Applicant admits that which is known in the prior art concerning the pasteurization of beer. See pages 1-5 of the specification. Applicant admits that the calculation claimed in claim 2 is the standard equation used in the art when optimizing or designing a pasteurization process. Further, the use of a recuperator is discussed. It would have been obvious to one of ordinary skill in the art to utilize the notoriously well known prior art equation in order to optimize the pasteurization process of Stoutz.

While neither disclosure teaches using a heating phase that is shorter than the cooling phase, this is a parameter that is a result effective variable that those of ordinary skill in the art would optimize in order to obtain the desired result.
